Spa Start-Up with @ease

1. Turn off power to spa before draining. After draining spa, make sure spa is properly cleaned. (Skip this step for new spas.)
2. Fill spa with fresh water to 1-2" above highest jet (Do **NOT** count neck and shoulder massage jets.)
3. Test Alkalinity and pH and balance accordingly.
 - a. Alkalinity should be between 80-120ppm
 - b. pH should be between 7.4- 7.8 (ideal is 7.6)
(Wait 2- 4hrs between each adjustment)
4. Establish a chlorine residual by adding JUMP START package.
5. Assemble your @ease floater or insert @ease cartridges to in-line assembly. (Blue stick set to 6 and grey stick or half ball set to 2)
6. Note on your calendar that chlorine bottom floater/cartridge lasts 3-4 weeks.

IMPORTANT:

Test spa water every 2 to 3 days. Maintain free chlorine levels of 0.5-1.0ppm levels at all times.

Add JUMP START *or* Spa Shock to spa once a week if necessary. For best results, set temp to 95* or higher.

Remove and clean filters once a month. Use a garden hose that has a pressure nozzle and make sure to get in between the pleats of the filter.

Soak filters every 4 months in a filter cleaner solution. Rinse filters thoroughly with a garden hose. Make sure filters are completely dry before replacing to allow the fibers to expand and fluff up, thus providing more effective filtration.

Drain spa every 3 to 4 months depending on use.

What to adjust first?

IF pH & ALKALINITY ARE BOTH HIGH- ADJUST BOTH BY USING pH LOWER.

IF pH IS HIGH AND ALKALINITY IS LOW- ADJUST pH FIRST AND THEN ALKALINITY.

IF pH AND ALKALINITY ARE BOTH LOW- ADJUST ALKALINITY FIRST.

IF pH IS LOW AND ALKALINITY IS HIGH- ADJUST ALKALINITY FIRST AND THEN pH.
